

Feathereum Specifications (Preview)

Based on Ethereum protocol and source code.

Coin generation method: PoW, minable

Mining Algorithm: Ethash with BOMB disabled*

Mining block reward:

1 - 172800 (60 days, about 2 month)

Static reward: **3.0 feather**

345601 - 1209700 (150 days, about 5 month)

Static reward: **2.0 feather**

1209701 -

Block reward changes once per a month according to this formula:

$\text{rewardLevel} = ((\text{blockHeight} - 1) / 172800) - 6$

$\text{miningReward} = ((\text{rewardLevel} - 1) / 22)^3 + 1)^{-1}$

Block reward decreases from **1.0 feather** to first slowly, later exponentially faster.

Block rewards all of above will be used to calculate uncle block rewards as well.

*Miner softwares same as Ethereum can be used.
